

Snake Tube™

Snake Tray® is pleased to present Snake Tube™, the only shielded hand bendable conduit with memory that protects and secures voice and data cables from extreme EMI, high temperatures and security breaches.

Manufactured in continuous lengths up to 100 meters, Snake Tube™ provides the advantage of being secure with no access via joints. Installation costs are significantly reduced over metal conduit, which requires fabrication and multiple fittings.

Snake Tube™ gives the ultimate security for cable protection and also enhances screening for data/signal protection. Snake Tube™ is resistant to extreme temperature due to its unique 3-layer construction and chemical resistant properties, which means it is suitable for installation in hazardous areas including tunnels, maritime applications, ships, submarines, and oil rigs.

- Bends easily to desired radius and maintains memory (no fabrication required)
- Manufactured in continuous lengths up to 100 meters providing security with no access via joints
- Can be buried in concrete (chemically inert)
- FR series is resistant to extreme temperatures (tested at 900°C for 3 hours)
- Shielded for secured data applications
- Lightweight for easy handling and installation
- Smooth internal bore makes pulling cables easier
- Low smoke zero halogen
